EEPROM programmer for microcontrollers of ST92F (ST9+) series

Authors: GarikBaza & Pavel-Pervomaysk web: <u>http://garikbaza.narod.ru/index_en.html</u> <u>http://garikbaza.at.ua/index/0-4</u> forum: <u>http://garikbaza.at.ua/forum</u>

This tool is intended to work with EEPROM of this microcontrollers. With this tool You can reset locked 10, locked 13, wait 30, even LOCKED FOREVER messages.

For example in this help file it's used Ford 4000 by Visteon (shown on pictures1. & 2.):

Picture 1.

First we will start with connecting of microcontroller (in further text MCU),to programmer :

As You can see on picture bellow (picture 3.), pins of programmer need to be connected to MCU just like on schematic .

ATTENTION!!! Before connecting be sure that pins 8 /9 /10 /11 of MCU are free from rest of circuit. In most cases it is necessary to remove package of four resistors (chip resistor 4 x 10K), see picture 4. Especially is very important to free pin 9 from rest of circuit – if this pin is left connected, there is no communication !!!

Detail explanations on pictures 4,5 and 6:

Picture 4.

Picture 5.

Picture 6.

Picture 5. and 6. showing the same soldering points, from top and bottom side.

Connect programmer to Your PC and You should see message: FT232 USB-> UART which asking You for driver. Give a full path to file "DRIVER_FT232 " which is on our web site and when installation is finished, You can go further . Detailed installation instructions is on following links:

http://www.reslers.de/IBUS/install.html

if You need to change port number (etc. COM4, COM5) here is link how to do that:

http://www.reslers.de/IBUS/port.html

After connecting programmer to MCU, You can start ST9 software.

You should see next screen (like shown on picture 7.):

Picture 11.

This option is for using with external adapter which is included in package with ST9+ programmer. It will supply adapter with power and frequency signal (4Mhz) to work with MCU when is pulled out from target. Cable for connecting adapter and ST9+ programmer is included in package.

For all additional questions, mail to us at:

garikbaza@mail.ru mazur_pavel@ukr.net

APPENDIX

Here will be described connections for other models with ST92F microcontroller. At this moment here is description for next models:

- FORD 4500 by VISTEON 4S61-18C815-AA B3 LOW CD
- FORD 6006 by VISTEON 2S61-18C815-HA B5 CDX6 MID (DOT MATRIX)
- FIAT STILO OA by VISTEON 2FCF-18C838-AF
- FORD 6000 by VISTEON YS4F-18C815-AC
- FORD 6000 by VISTEON 3S7T-18C815-AD
- LANDROVER VUX500150 by VISTEON 4CFF-18C838-AB
- FORD 4500 by VISTEON 3S61-18C815-BB

How new models arriving to me it will be added in the future. If You have pictures from other units tested by Yourself and 100% checked connection points and all other informations concerning to this document please send it to me at <u>rdelabyu@gmail.com</u> and it will be added as soon as possible.
